

Innovative Computing Systems

Your Full-Service Legal
Technology Partner.

Case Closed.

Founded in 1989, Innovative Computing Systems stands for integrity. We are deeply committed to efficiency through technology, and will never accept mediocrity as a solution to a problem. Innovative Computing Systems is the first-choice partner for law firms and legal departments thanks to our unmatched technology expertise and business acumen.

Our consultative approach guides clients through strategic evaluation and planning and manages execution in the following areas:

Managed IT Services

Our Managed IT Services group handles your day-to-day operations, minimizing downtime while maximizing profits. Clients enjoy benefits such as fixed-price per-seat pricing, a dedicated and responsive support team, virtual CIO services, operating systems, application and firmware updates, system monitoring, document management, backup, 24/7/365 coverage and more.

Enterprise Content Management (ECM)

Our Enterprise Content Management (ECM) group empowers clients to fully leverage organizational knowledge by developing and implementing strategies and technology to capture, manage, store, preserve and deliver content. We ensure that content is created and managed with business goals in mind, not simply churned out and stored in a repository never to be seen again, but easily accessible from anywhere on any device while remaining protected from harm or unauthorized disclosure.

Cloud Services

Moving to the Cloud allows law firms to immediately gain control of operational budgets, securely store important firm and client data, gain world-class disaster data backup and recovery capability and scale infrastructure at a moment's notice. Our Cloud practice group helps law firms stay competitive and provide the highest quality service to their clients.

Enterprise Servers & Storage

Our Enterprise Servers & Storage (ESS) group helps clients create a solid foundation upon which to build and run their practice. This highly experienced team works with clients to meet their design, infrastructure and implementation needs. Collaboration with all practice groups ensures compatibility across platforms.

Consulting

Our Consulting practice group offers clients the opportunity to outsource their entire IT management function, or bring on high-level expertise, without making an investment in additional overhead. We advise clients on security audits and reviews, as well as security remediation and consultation. We can help develop their strategic roadmap and budget, audit their needs, advise on IT policy and help plan for business continuity.

We've been
trusted partners
to our clients
for more than
25 years.

Desktop Management

Productivity is directly impacted by the quality of the environment in which lawyers, paralegals and professionals work. Whether operating a desktop, laptop, tablet or other device, peak performance is mandatory. With services that include scheduled patching, our Desktop Management group is composed of engineers with highly specialized knowledge to maximize productivity.

Telephony & Networking

Adopting IP Telephony can result in significant cost reductions, improved productivity and enhanced collaboration. Our Telephony & Networking group carefully selects industry-leading technologies, and then designs, implements, trains and supports best-of-breed solutions that our clients can depend on. Our services include penetration and vulnerability testing, as well as endpoint protection and monitoring.

“ Managing changing technology and law firm demands is tough; having Innovative Computing Systems as our engineering partner and navigating the day-to-day with their level of personable quality shown by staff and engineers, on deep-dive systems issues and firm-wide projects reveals much to me. It shows what can come about from a management culture that invests in knowledge, skills, and support systems for their employees. ”

**Bert Elishaw, IT Manager,
Hahn & Hahn LLP**
