What is Fortinet Firewall Monitoring?

FFM, powered by LogMojo, is a cloud-based monitoring solution specifically geared for Fortinet Firewalls.

FFM includes management, monitoring and proactive alerting built upon a distributed and fault-tolerant infrastructure. FFM combines high-speed real-time analysis of FortiGate logs with Intelligent Alerting and Drill Down Reporting.

FFM provides complete visibility of all aspects of Fortinet solutions, including Application Control, Web Content Filtering, Intrusion Prevention, Network Traffic, Vulnerability Scan, Data Leak Prevention, Antivirus, VPN/Remote Access, Wireless Network Connectivity and more.

FortiGate Firewall Monitoring includes easy-to-use monitoring of a single or thousands of FortiGate Firewalls. Features include FortiGate automatic configuration backups with change control, status reporting and contract awareness.

Add FortiGate Firewall Monitoring to your monitoring solution for better visibility into the overall health of your network.
